9	25/03/2025	Designing Architecture Diagram Using Star UML		
10	01/04/2025	Design User Interface		
11	08/04/2025	Implementation – Design a Web Page based on Scrum Methodology		
12	15/04/2025	Testing-Test Plan, Test Case and Load Testing		

Course Outcomes (COs)

Course Name: Software Engineering

Course Code: CS23432

CO 1	Understand the software development process models.
CO 2	Determine the requirements to develop software
CO 3	Apply modeling and modeling languages to design software products
CO 4	Apply various testing techniques and to build a robust software products
CO 5	Manage Software Projects and to understand advanced engineering concepts

CO - PO – PSO matrices of course

PO/PSO CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

EX NO: 1

Study of Azure DevOps

AIM:

To study how to create an agile project in Azure DevOps environment.

STUDY:

Azure DevOps is a cloud-based platform by Microsoft that provides tools for DevOps practices, including CI/CD pipelines, version control, agile planning, testing, and monitoring. It supports teams in automating software development and deployment.

1. Understanding Azure DevOps

Azure DevOps consists of five key services:

1.1 Azure Repos (Version Control)

Supports Git repositories and Team Foundation Version Control (TFVC). Provides features like branching, pull requests, and code reviews.

1.2 Azure Pipelines (CI/CD)

Automates build, test, and deployment processes.

Supports multi-platform builds (Windows, Linux, macOS).

Works with Docker, Kubernetes, Terraform, and cloud providers (Azure, AWS, GCP).

1.3 Azure Boards (Agile Project Management)

Manages work using Kanban boards, Scrum boards, and dashboards.

Tracks user stories, tasks, bugs, sprints, and releases.

1.4 Azure Test Plans (Testing)

Provides manual, exploratory, and automated testing.

Supports test case management and tracking.

1.5 Azure Artifacts (Package Management)

Stores and manages NuGet, npm, Maven, and Python packages. Enables versioning and secure access to dependencies.

Getting Started with Azure DevOps

Step 1: Create an Azure DevOps Account Visit

Azure DevOps.

Sign in with a Microsoft Account.

Create an Organization and a Project.

Step 2: Set Up a Repository (Azure Repos)

Navigate to Repos.

Choose Git or TFVC for version control.

Clone the repository and push your code.

Step 3: Configure a CI/CD Pipeline (Azure Pipelines)

Go to Pipelines → New Pipeline.

Select a source code repository (Azure Repos, GitHub, etc.)

Define the pipeline using YAML or the Classic Editor. Run the pipeline to build and deploy the application.

Step 4: Manage Work with Azure Boards

Navigate to Boards.

Create work items, user stories, and tasks. Organize sprints and track progress.

Step 5: Implement Testing (Azure Test Plans) Go

to Test Plans.

Create and run test cases

View test results and track bugs.

Result:

The study was successfully completed.

EX NO: 2

PROBLEM STATEMENT

AIM:

To prepare PROBLEM STATEMENT for your given project.

Problem Statement:

Online Quiz System:

In the rapidly evolving world of digital education, online platforms are increasingly adopting innovative tools to meet the dynamic needs of learners and educators. One such crucial area is the management of assessments. Institutions and educators are required to create, deliver, and evaluate numerous quizzes efficiently and effectively. However, the traditional manual approach to managing quizzes — including preparing questions, assigning difficulty levels, setting timers, evaluating responses, and generating results — is often time-consuming, error-prone, and lacks scalability.

Many educators face challenges such as inconsistent formatting, repetitive tasks, delayed evaluations, and lack of real-time feedback while conducting assessments. These issues not only reduce teaching efficiency but also affect the learner's experience due to slow feedback and poor performance tracking. A slow and inefficient quiz process can reduce student engagement and hinder academic progress.

To address these issues, there is a need for a smart and scalable **Online Quiz System** that simplifies and automates the entire quiz workflow. This system should offer features like bulk question uploads via CSV/Excel, timed quizzes, automatic grading, category-based quiz creation, real-time feedback, performance analytics, and error highlighting — ensuring faster, more accurate, and seamless assessments.

By implementing such a system, educators can manage assessments more efficiently, reduce manual effort, and concentrate on enhancing the quality of instruction. It also ensures that learners receive immediate and accurate feedback, promoting better understanding, motivation, and academic performance.

Overall, this project aims to develop a reliable and user-friendly **Online Quiz System** that not only streamlines the quiz management process but also contributes to the growth, engagement, and success of digital learning environments.

Result:

The problem statement was written successfully.

EX NO: 3**AGILE PLANNING****Aim:**

To prepare an Agile Plan.

THEORY

Agile planning is a part of the Agile methodology, which is a project management style with an incremental, iterative approach. Instead of using an in-depth plan from the start of the project—which is typically product-related—Agile leaves room for requirement changes throughout and relies on constant feedback from end users.

With Agile planning, a project is broken down into smaller, more manageable tasks with the ultimate goal of having a defined image of a project's vision. Agile planning involves looking at different aspects of a project's tasks and how they'll be achieved, for example:

- Roadmaps to guide a product's release ad schedule
- Sprints to work on one specific group of tasks at a time
- A feedback plan to allow teams to stay flexible and easily adapt to change

User stories, or the tasks in a project, capture user requirements from the end user's perspective Essentially, with Agile planning, a team would decide on a set of user stories to action at any given time, using them as a guide to implement new features or functionalities in a tool. Looking at tasks as user stories is a helpful way to imagine how a customer may use a feature and helps teams prioritize work and focus on delivering value first.

- Steps in Agile planning process
 1. Define vision
 2. Set clear expectations on goals
 3. Define and break down the product roadmap
 4. Create tasks based on user stories
 5. Populate product backlog
 6. Plan iterations and estimate effort
 7. Conduct daily stand-ups
 8. Monitor and adapt

Result:

Thus the Agile plan was completed successfully.

EX NO: 4

CREATE USER STORIES

Aim:

To create User Stories

THEORY

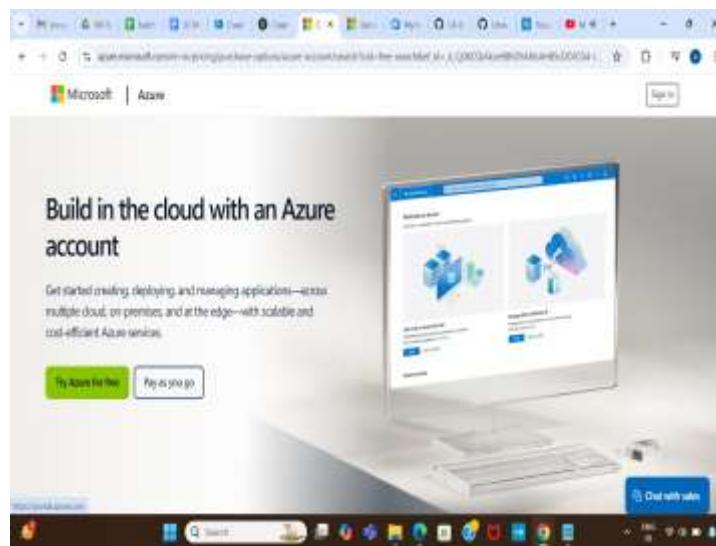

A user story is an informal, general explanation of a software feature written from the perspective of the end user. Its purpose is to articulate how a software feature will provide value to the customer.

User story template

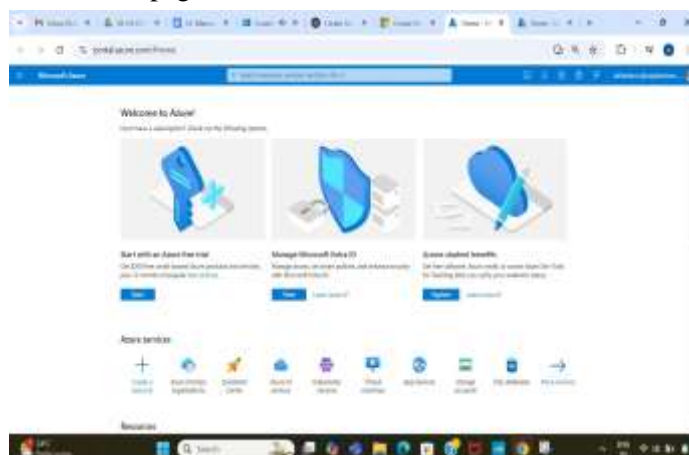

"As a [role], I [want to], [so that]."

Procedure:

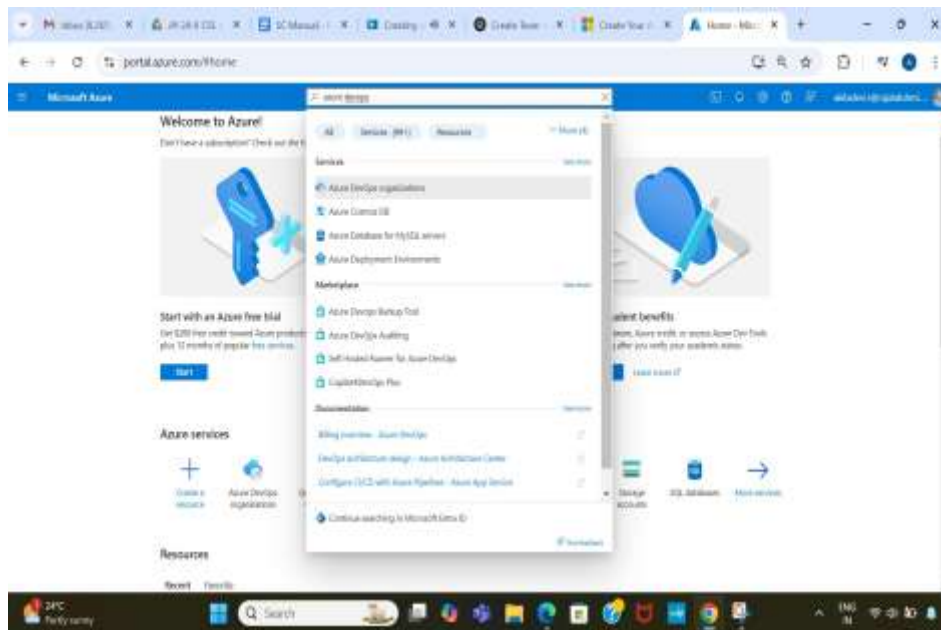

1. Open your web browser and go to the Azure website:
<https://azure.microsoft.com/en-in> Sign in using your Microsoft account credentials. If you don't have an account, you'll need to create one.
2. If you don't have a Microsoft account, you can sign up for
<https://signup.live.com/?lic=1>

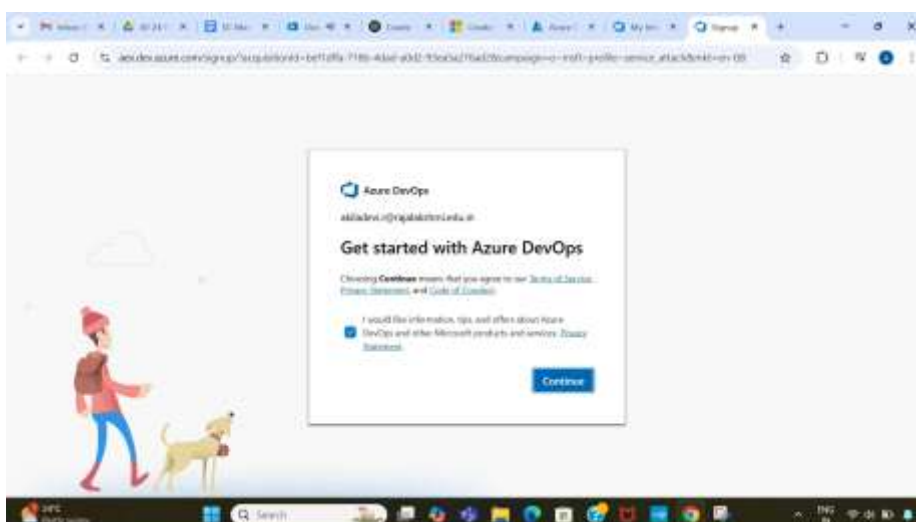

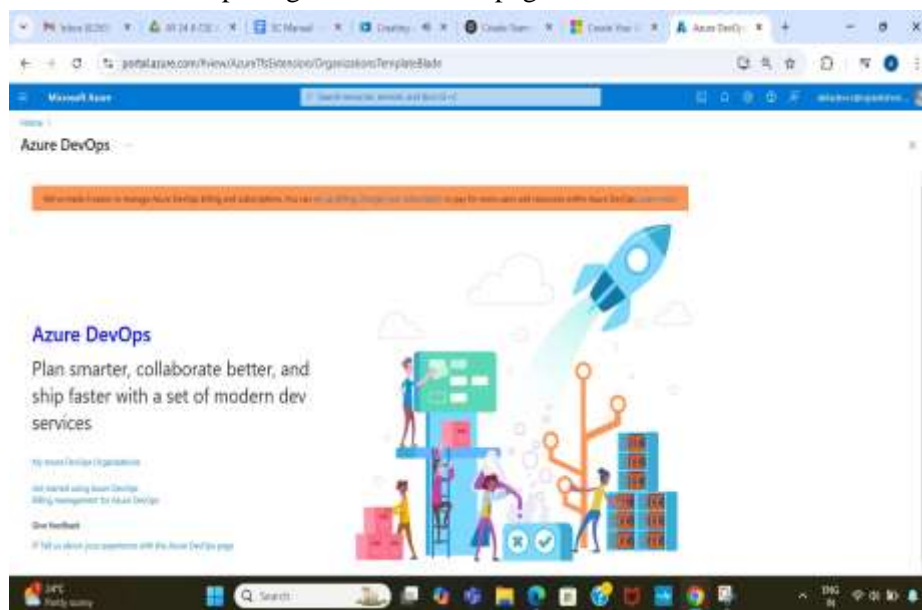

3. Azure home page

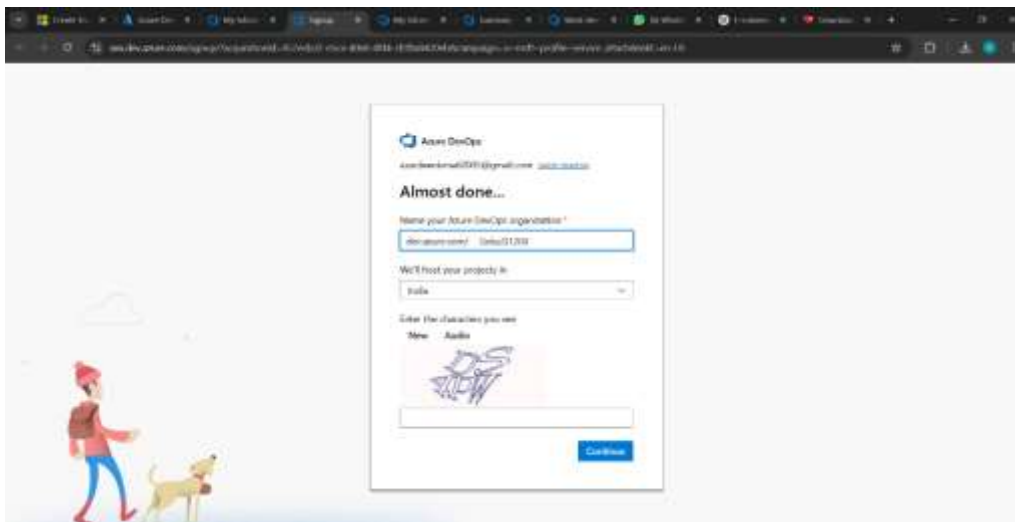

4. Open DevOps environment in the Azure platform by typing Azure DevOps Organizations in the search bar.

5. Click on the My Azure DevOps Organization link and create an organization and you should be taken to the Azure DevOps Organization Home page.

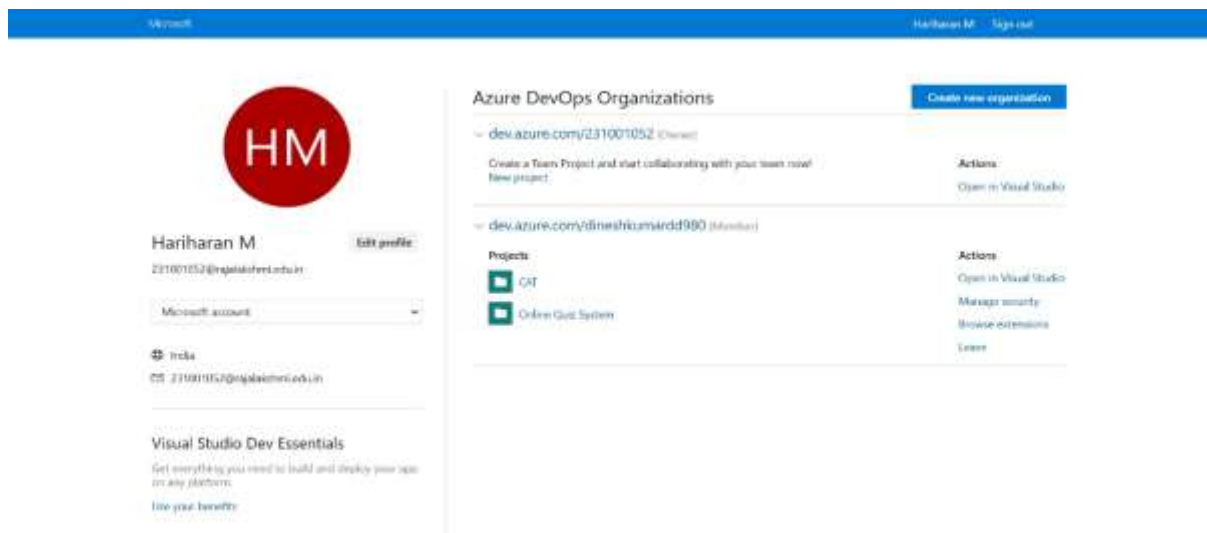

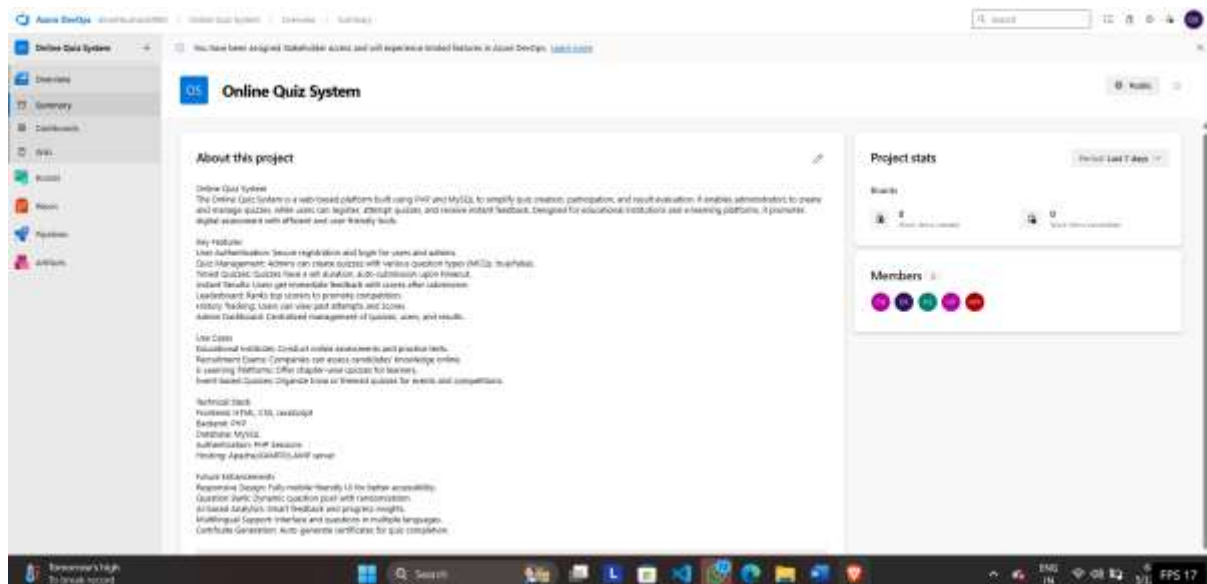

After the organization is set up, you'll need to create your first **project**. This is where you'll begin to manage code, pipelines, work items, and more.

- i. On the organization's **Home page**, click on the **New Project** button.
- ii. Enter the project name, description, and visibility options:
 - o **Name:** Choose a name for the project (e.g., **LMS**).
 - o **Description:** Optionally, add a description to provide more context about the project.
 - o **Visibility:** Choose whether you want the project to be **Private** (accessible only to those invited) or **Public** (accessible to anyone).
- iii. Once you've filled out the details, click **Create** to set up your first project.

6. Once logged in, ensure you are in the correct organization. If you're part of multiple organizations, you can switch between them from the top left corner (next to your user profile). Click on the Organization name, and you should be taken to the Azure DevOps Organization Home page.

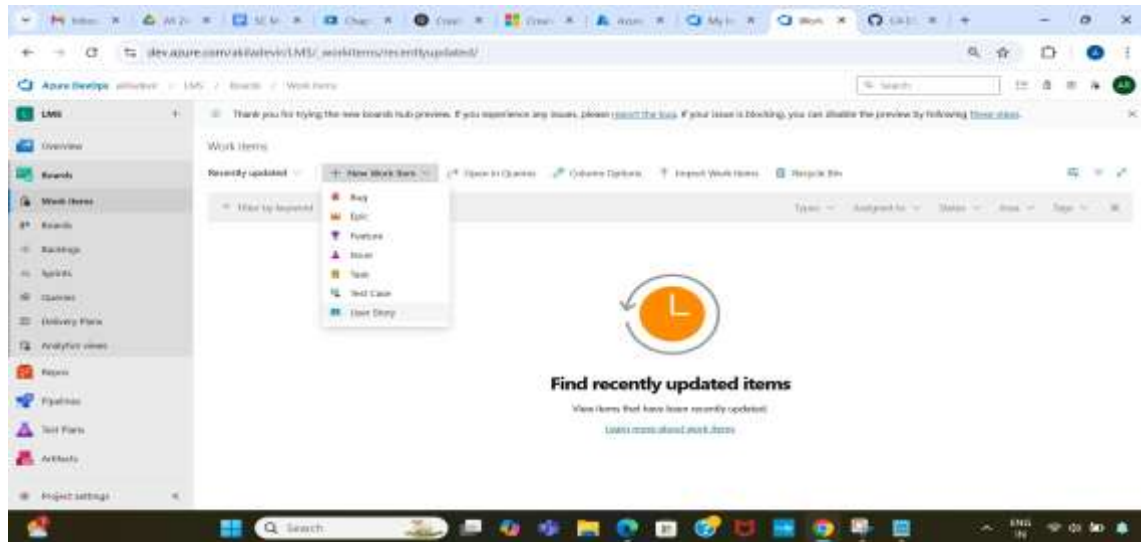

7. Project dashboard

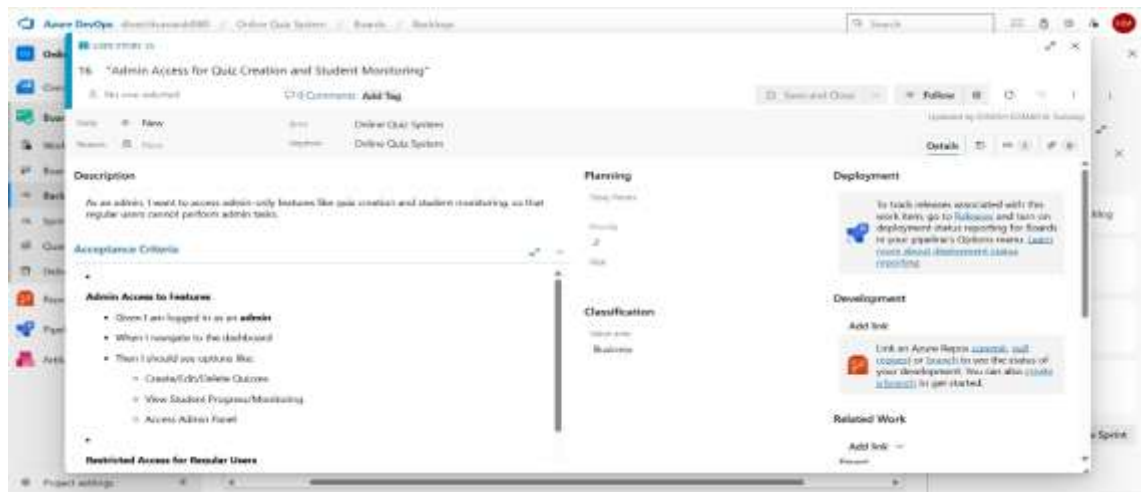

9. To manage user stories

- From the **left-hand navigation menu**, click on **Boards**. This will take you to the main **Boards** page, where you can manage work items, backlogs, and sprints.
- On the **work items** page, you'll see the option to **Add a work item** at the top. Alternatively, you can find a + button or **Add New Work Item** depending on the view you're in. From the **Add a work item** dropdown, select **User Story**. This will open a form to enter details for the new User Story.

8. Fill in User Story Details

Result:

The user story was written successfully.

EX NO: 5

SEQUENCEDIAGRAM

AIM:

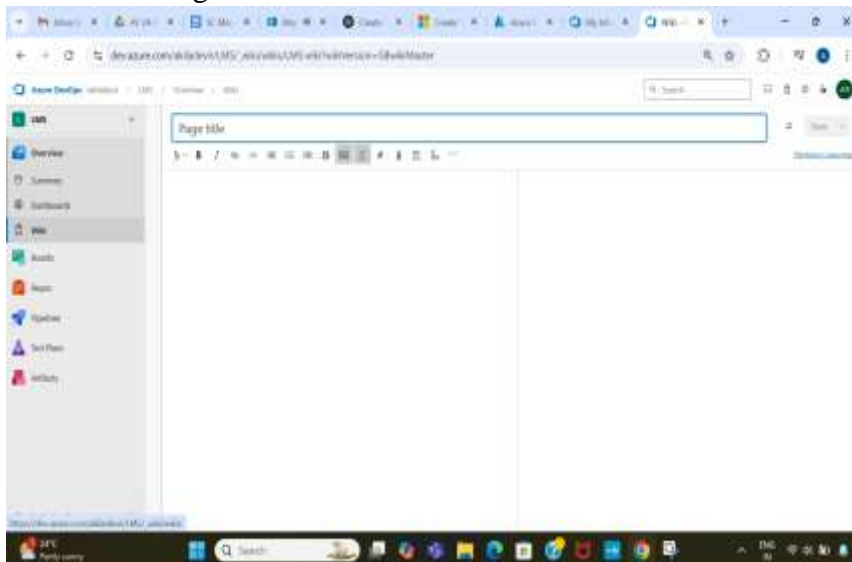

To design a Sequence Diagram by using Mermaid.js

THEORY:

A Sequence Diagram is a key component of Unified Modelling Language (UML) used to visualize the interaction between objects in a sequential order. It focuses on how objects communicate with each other over time, making it an essential tool for modelling dynamic behaviour in a system.

Procedure:

1. Open a project in Azure DevOps Organisations.
2. To design select wiki from menu

3. Write code for drawing sequence diagram and save the code.

```
:::mermaid
```

sequenceDiagram

-->> Dotted line with arrowhead

<<->> Solid line with bidirectional arrowheads (v11.0.0+)

--x	Dotted line with a cross at the end
-----	-------------------------------------

--) Dotted line with a open arrow at the end (async)

4.click wiki menu and select the page

Result:

The sequence diagram was drawn successfully.

EX NO. 6

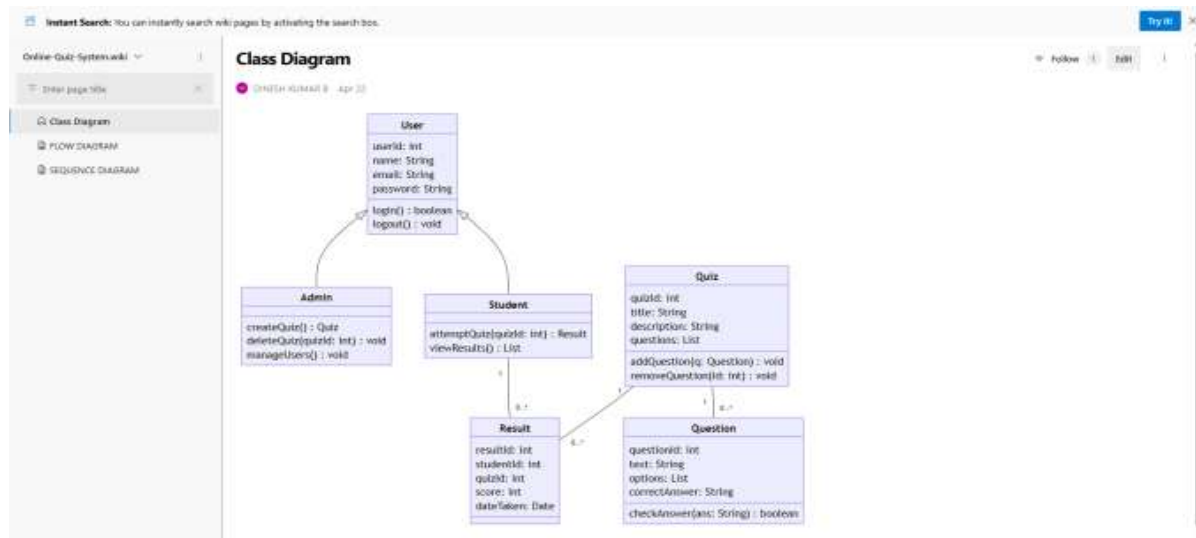

CLASS DIAGRAM

AIM :-

To draw a sample class diagram for your project or system.

THEORY

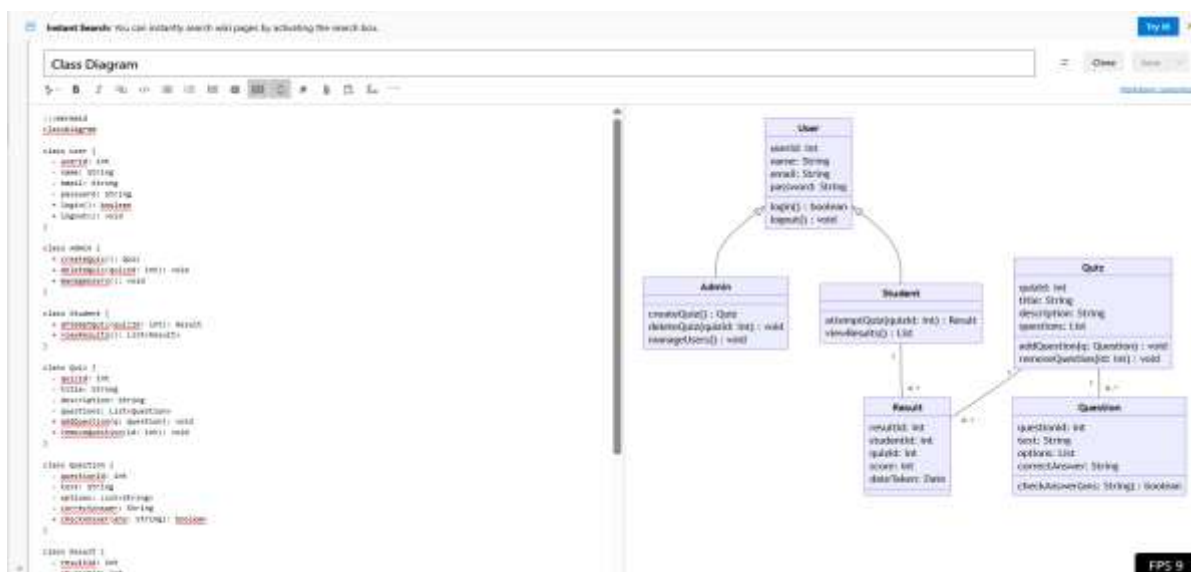

A UML class diagram is a visual tool that represents the structure of a system by showing its classes, attributes, methods, and the relationships between them.

Notations in class diagram

Procedure:

1. Open a project in Azure DevOps Organisations.

2. To design select wiki from menu
- 3.
4. Write code for drawing class diagram and save the code

:::mermaid

classDiagram

class User {

- userId: int

- name: String

- email: String

- password: String

+ login(): boolean

+ logout(): void

}

class Admin {

+ createQuiz(): Quiz

+ deleteQuiz(quizId: int): void

+ manageUsers(): void

}

class Student {

+ attemptQuiz(quizId: int): Result

+ viewResults(): List<Result>

}

Result:

The use case diagram was designed successfully.

EX NO: 7

USECASE DIAGRAM

Aim:

Steps to draw the Use Case Diagram using draw.io

Theory:

• UCD shows the relationships among actors and use cases within a system which Provide an overview of all or part of the usage requirements for a system or organization in the form of an essential model or a business model and communicate the scope of a development project

- **Use Cases**
- **Actors**
- **Relationships**
- **System Boundary Boxes**

Procedure

Step 1: Create the Use Case Diagram in Draw.io

- Open Draw.io (diagrams.net).
- Click "Create New Diagram" and select "Blank" or "UML Use Case" template.
- Add Actors (Users, Admins, External Systems) from the UML section.
- Add Use Cases (Functionalities) using ellipses.
- Connect Actors to Use Cases with lines (solid for direct interaction, dashed for <<include>> and <<extend>>).
- Save the diagram as .drawio or export as PNG/JPG/SVG.

Step 2: Upload the Diagram to Azure DevOps

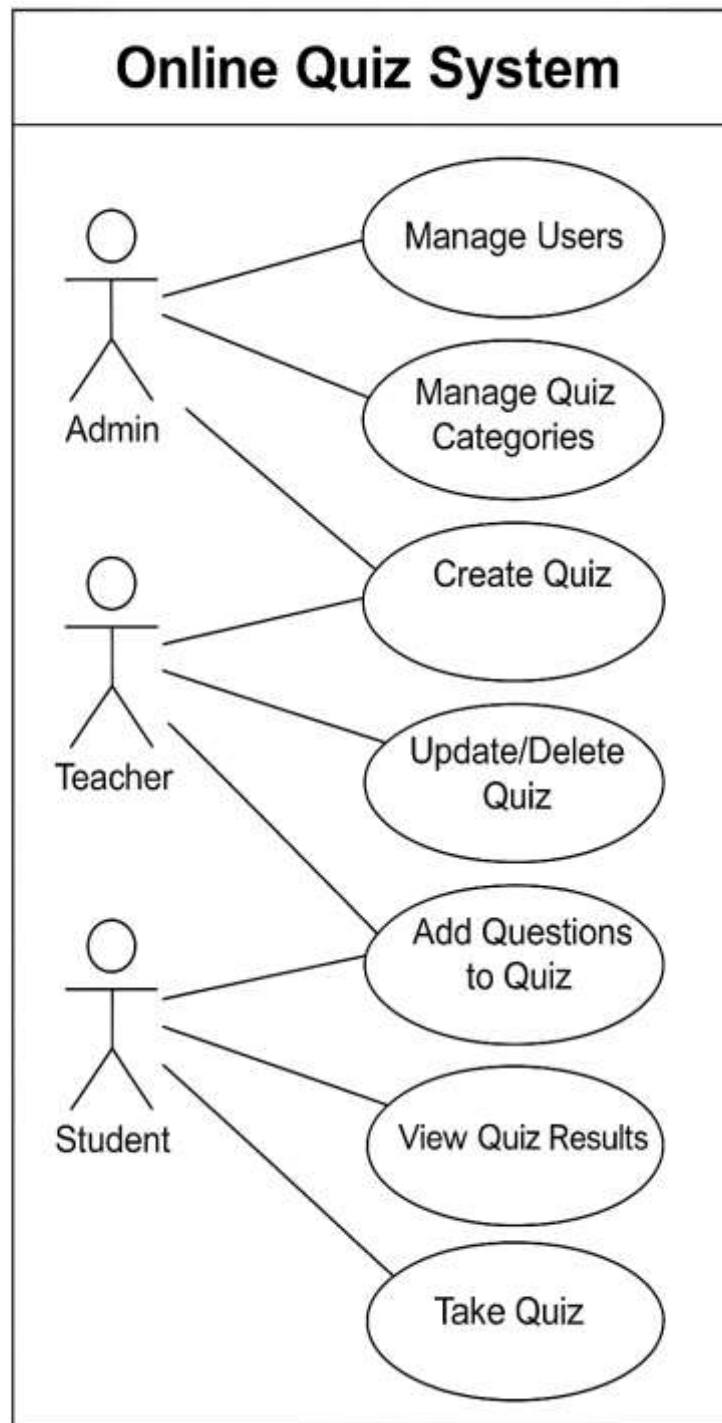

Option 1: Add to Azure DevOps Wiki

- Open Azure DevOps and go to your project.
- Navigate to Wiki (Project > Wiki).
- Click "Edit Page" or create a new page.
- Drag & Drop the exported PNG/JPG image.
- Use Markdown to embed the diagram:
- `![Use Case Diagram](attachments/use_case_diagram.png)`

Option 2: Attach to Work Items in Azure Boards

- Open Azure DevOps → Navigate to Boards (Project > Boards).
- Select a User Story, Task, or Feature.
- Click "Attachments" → Upload your Use Case Diagram.
- Add comments or descriptions to explain the use case.

USE CASE DIAGRAM:

Result:

The use case diagram was designed successfully

EX NO. 8

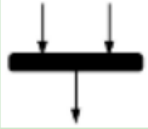

ACTIVITY DIAGRAM

AIM :-

To draw a sample activity diagram for your project or system.

THEORY

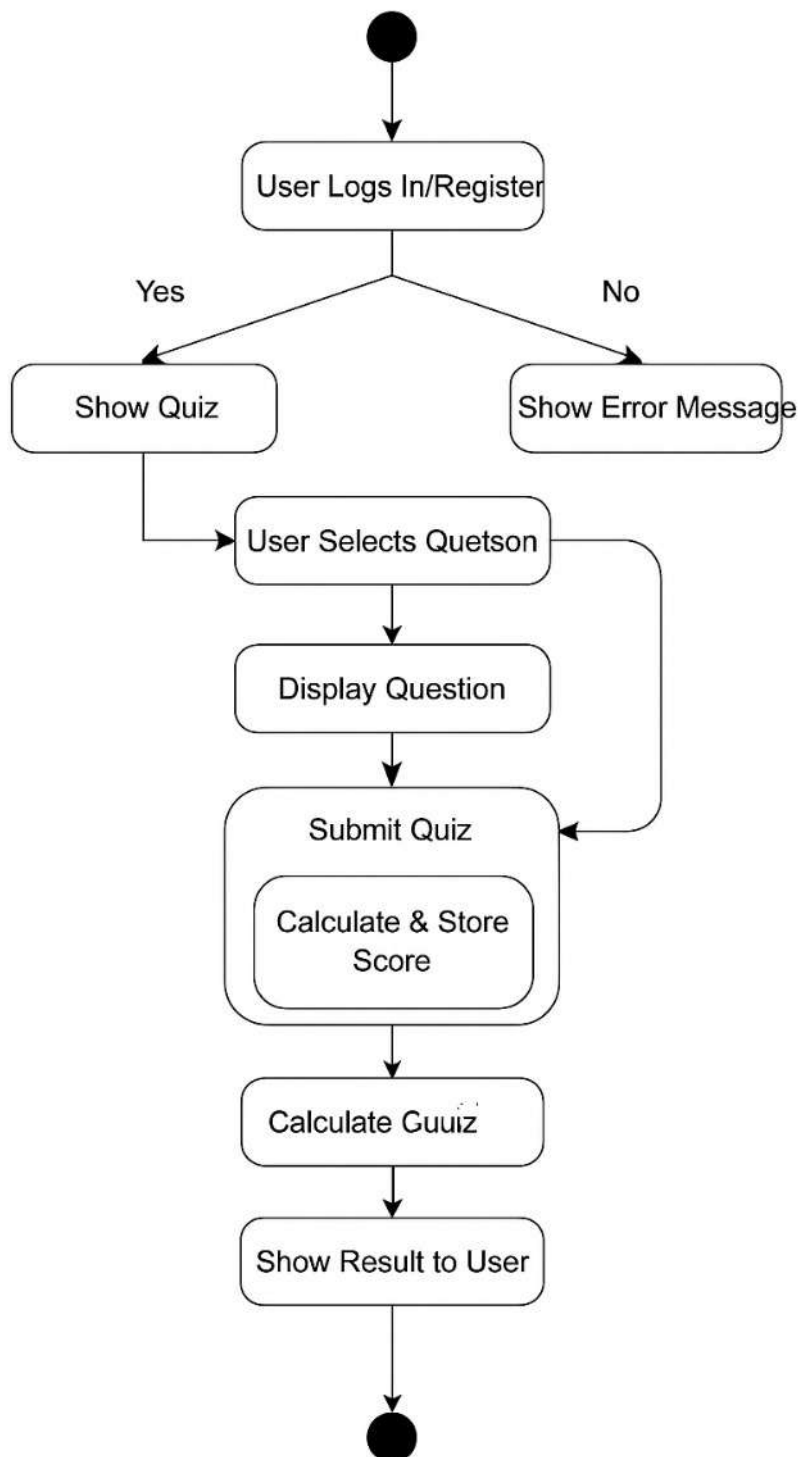

Activity diagrams are an essential part of the Unified Modelling Language (UML) that help visualize workflows, processes, or activities within a system. They depict how different actions are connected and how a system moves from one state to another.

Notations	Symbol	Meaning
Start		Shows the beginning of a process
Connector		Shows the directional flow, or control flow, of the activity
Joint symbol		Combines two concurrent activities and re-introduces them to a flow where one activity occurs at a time
Decision		Represents a decision
Note		Allows the diagram creators to communicate additional messages
Send signal		Show that a signal is being sent to a receiving activity
Receive signal		Demonstrates the acceptance of an event
Flow final symbol		Represents the end of a specific process flow
Option loop		Allows the creator to model a repetitive sequence within the option loop symbol
Shallow history pseudostate		Represents a transition that invokes the last active state.
End		Marks the end state of an activity and represents the completion of all flows of a process

Procedure

1. Draw diagram in draw.io
2. Upload the diagram in Azure DevOps wiki

Online Quiz System

Result:

The activity diagram was designed successfully

EX NO. 9

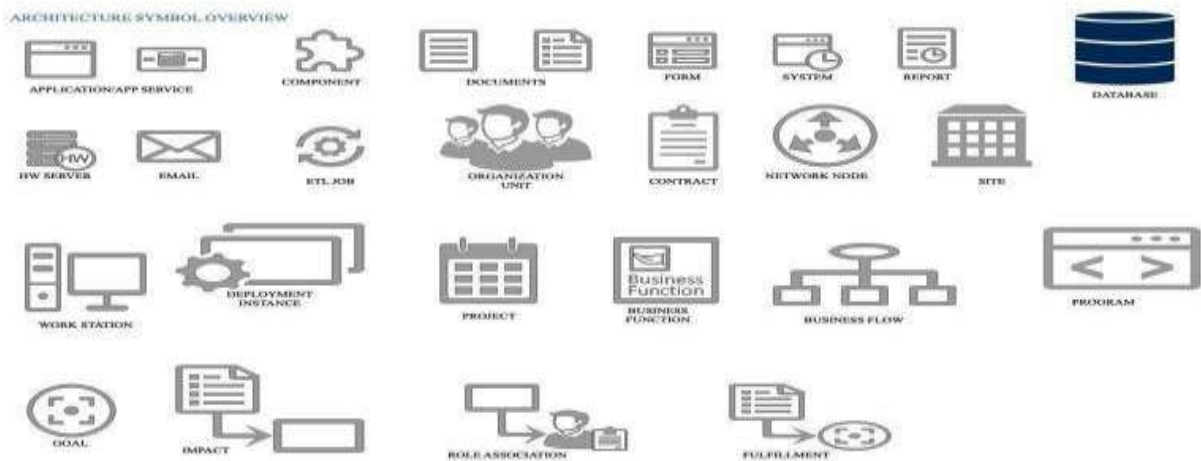

ARCHITECTURE DIAGRAM

Aim:

Steps to draw the Architecture Diagram using draw.io.

Theory:

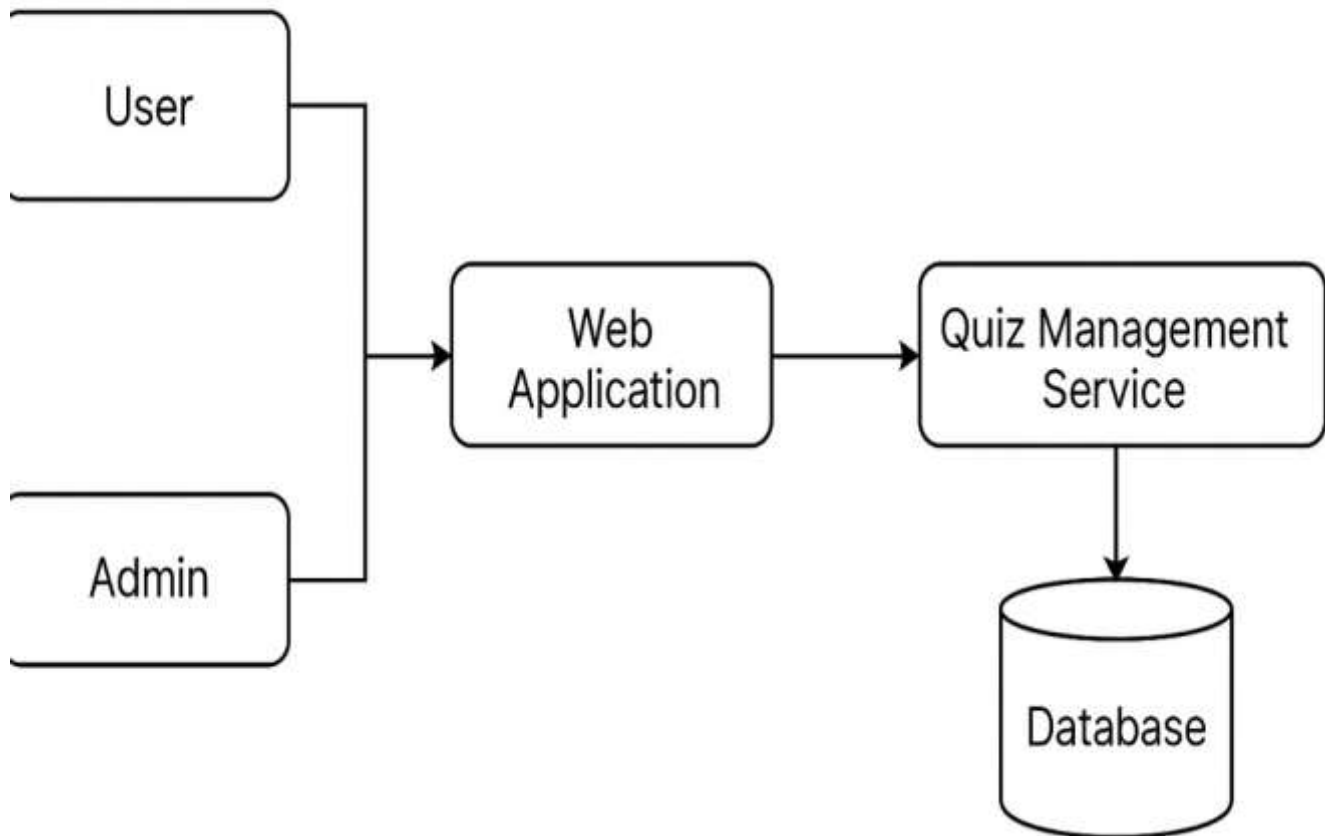

An architectural diagram is a visual representation that maps out the physical implementation for components of a software system. It shows the general structure of the software system and the associations, limitations, and boundaries between each element.

Procedure

1. Draw diagram in draw.io
2. Upload the diagram in Azure DevOps wiki

Quiz Management System

Result:

The architecture diagram was designed successfully

EX NO. 10

USER INTERFACE

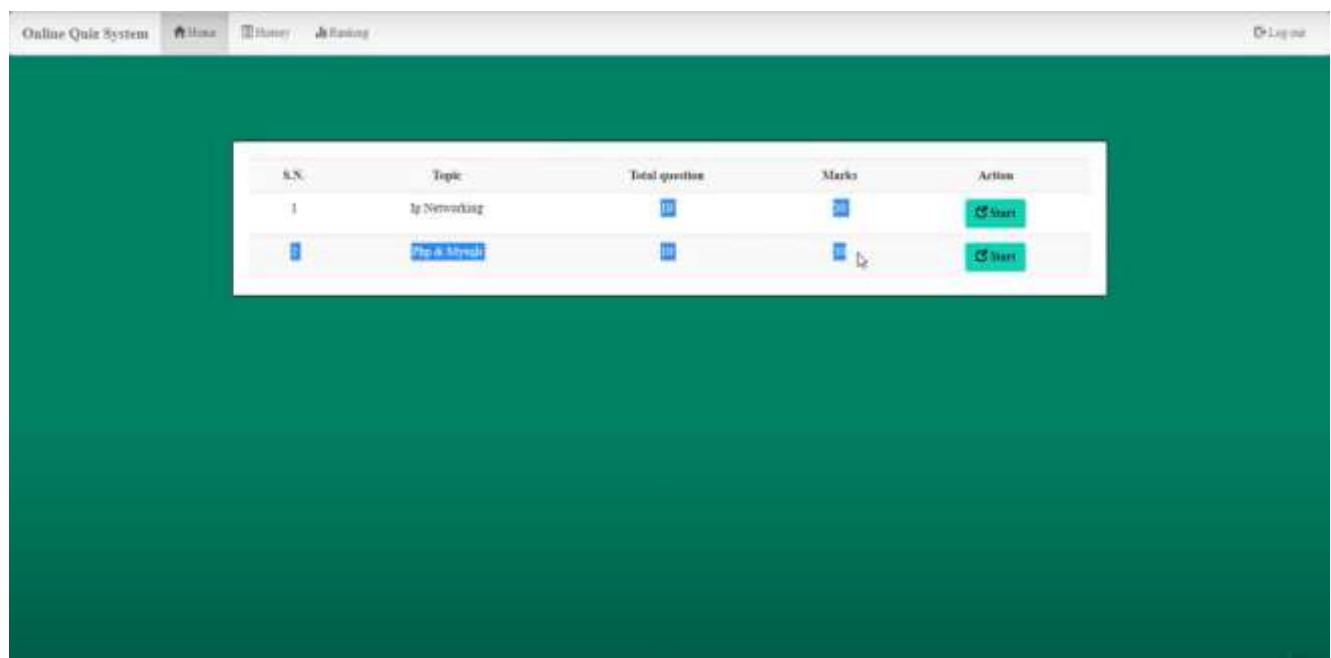

Aim:

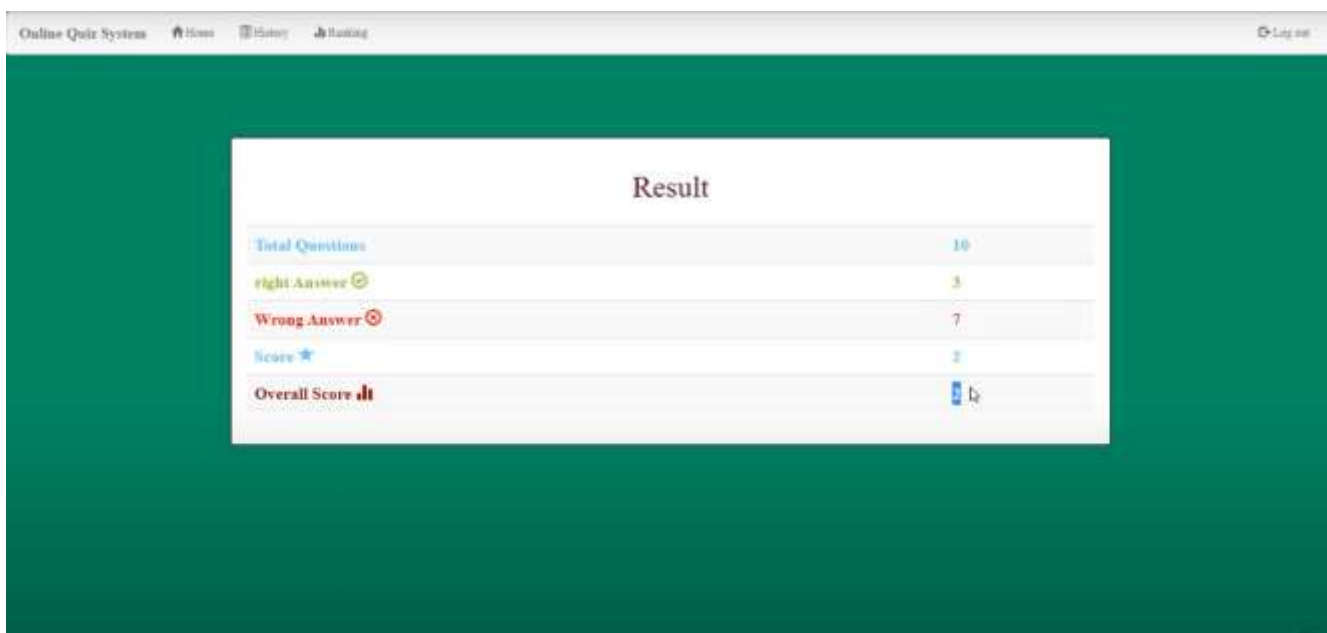

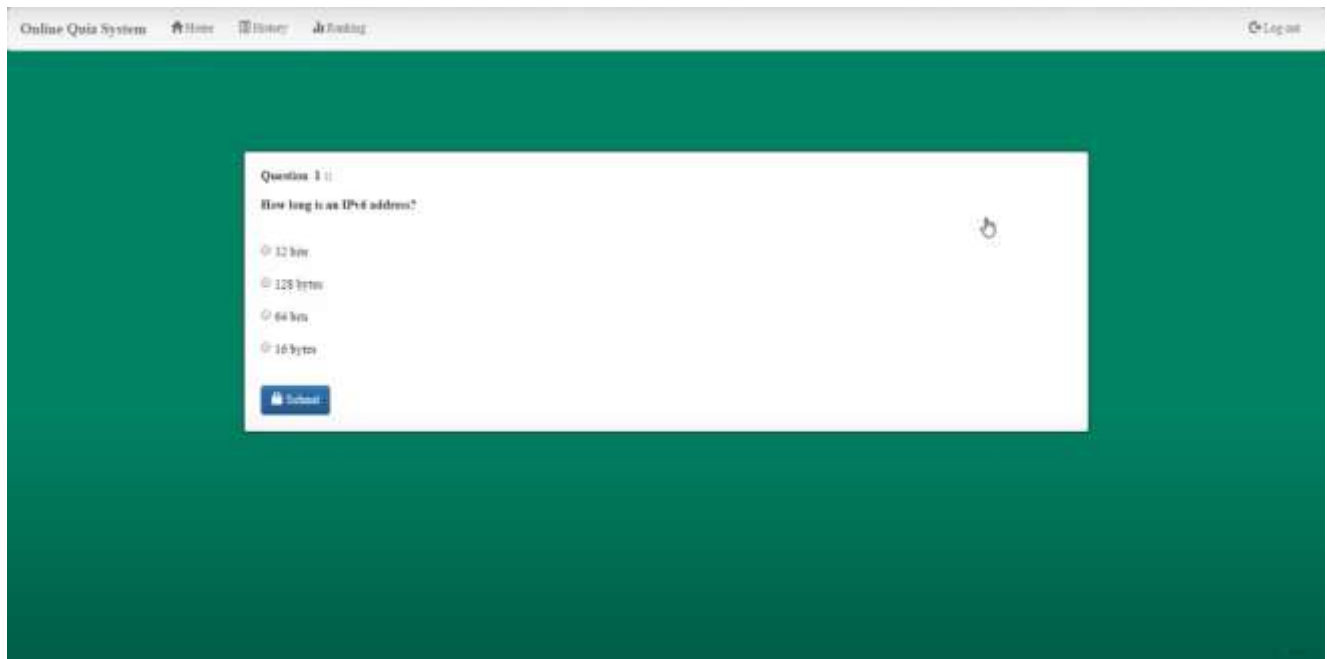

Design User Interface for the given project

User Interface:

User Interface (UI) refers to the visual layout and interactive elements of a software application or website that allow users to interact with the system. It includes components like buttons, menus, input fields, icons, colors, typography, and the overall screen layout.

A well-designed UI ensures that users can easily and efficiently navigate, understand, and use the application to achieve their goals.

Result:

The UI was designed successfully.

EX NO. 11

IMPLEMENTATION

Aim:

To implement the given project based on Agile Methodology.

Procedure:

Step 1: Set Up an Azure DevOps Project

- Log in to Azure DevOps.
- Click "New Project" → Enter project name → Click "Create".
- Inside the project, navigate to "Repos" to store the code.

Step 2: Add Your Web Application Code

- Navigate to Repos → Click "Clone" to get the Git URL.
- Open Visual Studio Code / Terminal and run:

```
git clone <repo_url>
cd <repo_folder>
```
- Add web application code (HTML, CSS, JavaScript, React, Angular, or backend like Node.js, .NET, Python, etc.).
- Commit & push:

```
git add .
git commit -m "Initial commit"
git push origin main
```

Step 3: Set Up Build Pipeline (CI/CD - Continuous Integration)

- Navigate to Pipelines → Click "New Pipeline".
- Select Git Repository (Azure Repos, GitHub, or Bitbucket).
- Choose Starter Pipeline or a pre-configured template for your framework.

Modify the azure-pipelines.yml file (Example for a Node.js app):

```
trigger:
- main
pool:
  vmImage: 'ubuntu-latest'

steps:
- task: UseNode@1
  inputs:
    version: '16.x'
- script: npm install
  displayName: 'Install dependencies'
- script: npm run build
  displayName: 'Build application'
- task: PublishBuildArtifacts@1
- inputs:
  pathToPublish: 'dist'
  artifactName: 'drop'
```

Click "Save and Run" → The pipeline will start building app.

Step 4: Set Up Release Pipeline (CD - Continuous Deployment)

- Go to Releases → Click "New Release Pipeline".
- Select Azure App Service or Virtual Machines (VMs) for deployment.
- Add an artifact (from the build pipeline).
- Configure deployment stages (Dev, QA, Production).
- Click "Deploy" to push your web app to Azure.

Result

Thus, the application was successfully implemented.

EX NO. 12

TESTING

a) TESTING-TEST PLANS & TEST CASES

Aim:

Test Plans and Test Case and write two test cases for at least five user stories showcasing the happy path and error scenarios in azure DevOps platform.

Test Planning and Test Case

Test Case Design Procedure

1. Understand Core Features of the Application

- User Signup & Login
- Viewing and Managing Playlists
- Fetching Real-time Metadata
- Editing playlists (rename, reorder, record)
- Creating smart audio playlists based on categories (mood, genre, artist, etc.)

2. Define User Interactions

- Each test case simulates a real user behaviour (e.g., logging in, renaming a playlist, adding a song).

3. Design Happy Path Test Cases

- Focused on validating that all features function as expected under normal conditions.
- Example: User logs in successfully, adds item to playlist, or creates a category-based playlist.

4. Design Error Path Test Cases

- Simulate negative or unexpected scenarios to test robustness and error handling.
- Example: Login fails with invalid credentials, save fails when offline, no recommendations found.

5. Break Down Steps and Expected Results

- Each test case contains step-by-step actions and a corresponding expected outcome.
- Ensures clarity for both testers and automation scripts.

6. Use Clear Naming and IDs

- Test cases are named clearly (e.g., TC01 – Successful Login, TC10 – Save Playlist Fails).
- Helps in quick identification and linking to user stories or features.

7. Separate Test Suites

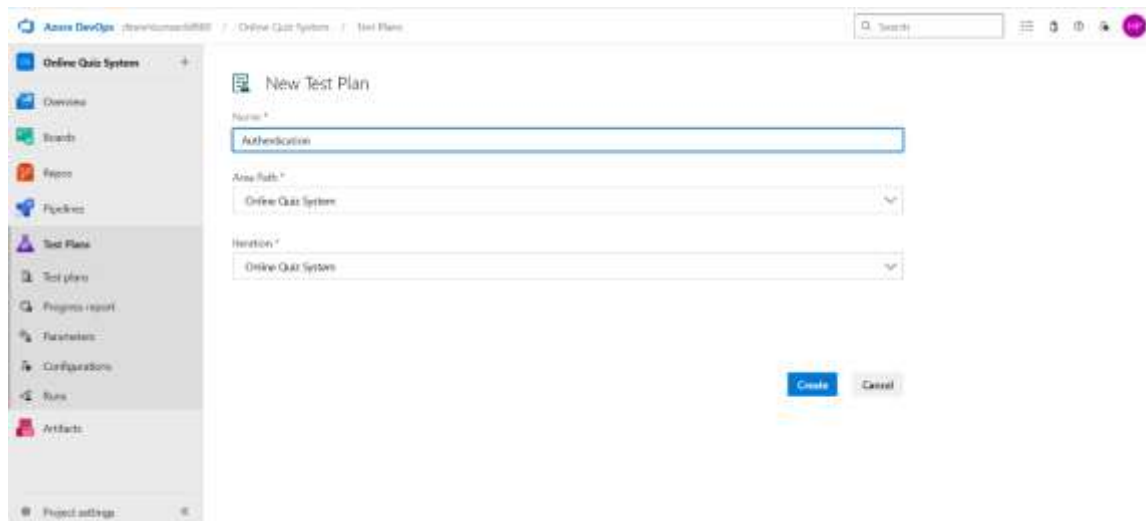

- Grouped test cases based on functionality (e.g., Login, Playlist Editing, Recommendation System).

- Improves organization and test execution flow in Azure DevOps.

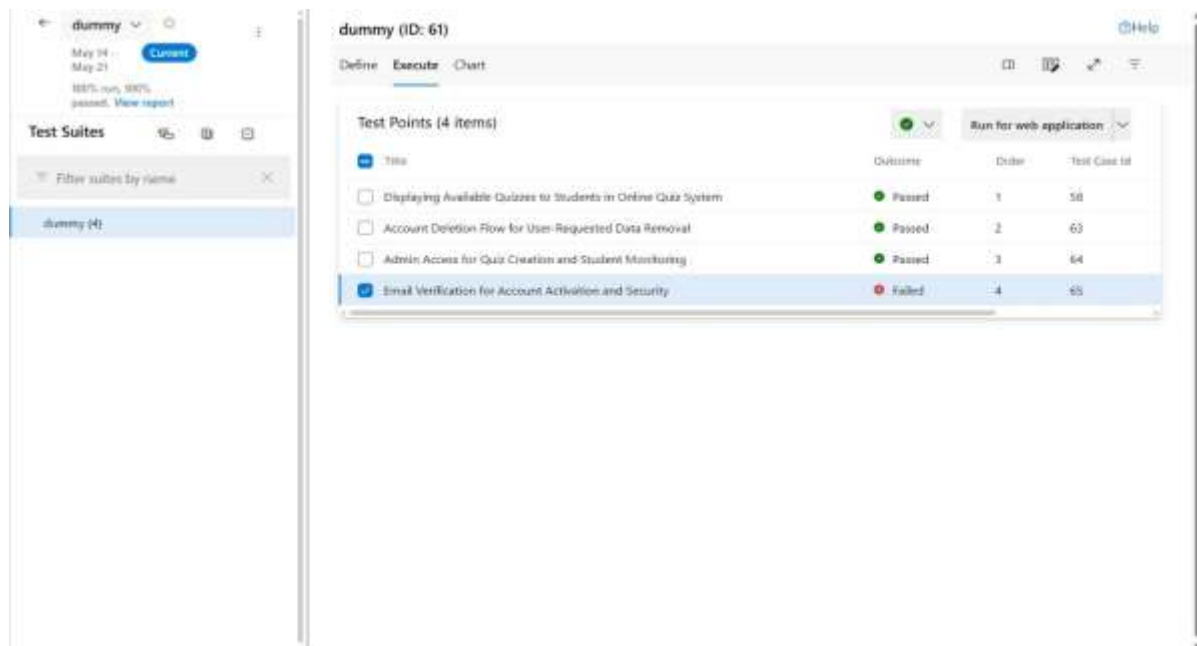

8. Prioritize and Review

- Critical user actions are marked high-priority.
- Reviewed for completeness and traceability against feature requirements.

1.New test plan

2.Test suite

3. Test case

Give two test cases for at least five user stories showcasing the happy path and error scenarios in Azure DevOps platform.

Online Quiz System – Test Plans

USER STORIES

- ☐ **US201** – As a student, I want to register and log in to the system.
- ☐ **US202** – As a student, I want to take a quiz and submit answers.
- ☐ **US203** – As a student, I want to view my quiz results.
- ☐ **US204** – As an admin, I want to create a new quiz with multiple questions.
- ☐ **US205** – As an admin, I should not be able to create a quiz without adding any questions.

Test Suite: TS01 – User Authentication (ID: 301)

Test Suites

1. TC01 – Successful Registration and Login

- **Action:**
 - Navigate to registration page.
 - Enter valid name, email, and password.
 - Submit form.
 - Go to login page and enter credentials.
- **Expected Results:**
 - User account is created.
 - Login successful, user redirected to dashboard.
- **Type:** Happy Path

2. TC02 – Registration with Missing Fields

- **Action:**
 - Navigate to registration page.
 - Leave the email field blank.
 - Submit form.
- **Expected Results:**
 - Validation fails.
 - Error “Email is required” is displayed.
 - Registration is not completed.
- **Type:** Error Path

3. TC03 – Login with Invalid Credentials

- **Action:**
 - Navigate to login page.
 - Enter incorrect email and/or password.
 - Click "Login".
- **Expected Results:**
 - Login fails.
 - Message “Invalid email or password” is displayed.
- **Type:** Error Path

4. TC04 – Password Validation During Registration

- **Action:**
 - Navigate to registration page.
 - Enter valid email and name.
 - Enter a password less than 6 characters (e.g., "abc").
 - Click "Register".
- **Expected Results:**
 - Registration fails.
 - Error message "Password must be at least 6 characters long" is shown.
- **Type:** Error Path

Test Suite: TS02 – Quiz Participation (ID: 302)

1. TC05 – View Quiz Results

- **Action:**
 - Log in as a student.
 - Navigate to "My Results".
 - Click on a completed quiz.
- **Expected Results:**
 - Quiz results are shown with score, correct answers, and feedback.
- **Type:** Happy Path

2. TC06 - View Results Without Submitting Quiz

- **Action:**
 - Attempt to view results for a quiz that hasn't been submitted.
- **Expected Results:**
 - Message "No results available – quiz not attempted" is displayed.
- **Type:** Error Path

3. TC07 – Results Display Accuracy

- **Action:**
 - Complete a quiz with known correct/incorrect answers.
 - View results.
- **Expected Results:**
 - Scores and feedback match the actual answers submitted.
 - Answer key is displayed accurately.
- **Type:** Happy Path

Test Suit: TS03 – Upload Notifications (ID: 108)

1. TC08 – Successful Quiz Attempt

- **Action:**
 - Log in as a student.
 - Select an available quiz and start it.
 - Answer all questions and click "Submit".
- **Expected Results:**
 - Quiz is submitted.
 - Confirmation message "Quiz submitted successfully" is shown.
- **Type:** Happy Path

Repro Steps

5/14/2025 4:58 PM Bug filed on "Displaying Available Quizzes to Students in Online Quiz System"

Step no.	Result	Title
1.	Passed	Login as a student user and navigate to the Available Quizzes page. Expected Result The page loads and displays quizzes assigned to the student or marked as public.
2.	Passed	Verify the quiz list shows Title, Subject, Duration, and Status Expected Result All quizzes display complete details, and statuses are shown (Attempted/Next).
3.	Passed	Check if past/expired quizzes are visible. Expected Result Expired quizzes should either not appear or should be clearly marked as expired.

12.View the new test case template

Result:

The test plans and test cases for the user stories is created in Azure DevOps with Happy Path and Error Path

b) Load Testing and Performance Testing

Aim:

To create an Azure Load Testing resource and run a load test to evaluate the performance of a target endpoint.

Load Testing

Steps to Create an Azure Load Testing Resource:

Before you run your first test, you need to create the Azure Load Testing resource:

1. Sign in to Azure Portal
Go to <https://portal.azure.com> and log in.
2. Create the Resource
 - Go to *Create a resource* → Search for “Azure Load Testing”.
 - Select Azure Load Testing and click Create.
3. Fill in the Configuration Details
 - *Subscription*: Choose your Azure subscription.
 - *Resource Group*: Create new or select an existing one.
 - *Name*: Provide a unique name (no special characters).
 - *Location*: Choose the region for hosting the resource.
4. (Optional) Configure tags for categorization and billing.
5. Click Review + Create, then Create.
6. Once deployment is complete, click Go to resource.

Steps to Create and Run a Load Test:

Once your resource is ready:

1. Go to your Azure Load Testing resource and click Add HTTP requests > Create.
2. Basics Tab

Online Quiz System				
Home History Ranking Log out				
S.N.	Topic	Total question	Marks	Action
1	ip Networking	10	10	Start
2	Php & MySQL	10	10	Start

Result:

Successfully created the Azure Load Testing resource and executed a load test to assess the performance of the specified endpoint.
